In your care, she is protected...
...for all her tomorrows

The adhesion barrier that conforms for control you can count on

GYNECARE INTERCEED® Absorbable Adhesion Barrier
is easy to handle, and conforms to pelvic organs
• Does not crack, tear, or stick to gloves
• May be rolled or folded to aid in placement. Final placement should be flat (not folded or rolled)
• Pliability allows it to contour to organs of varying shapes and sizes for full coverage

Easy to use right out of the box
• Must be applied dry to traumatized tissues, after meticulous hemostasis has been achieved¹
• Forms a continuous protective coating during the critical 5-7 day peritoneal healing period²

Proven safe and effective in gynecologic procedures

**GYNECARE INTERCEED Adhesion Barrier has been shown in various gynecologic studies to:**
- Significantly and safely reduce the incidence of both new and reformed adhesions
- Be clinically effective across multiple gynecological procedures
- Be up to 2 times more effective than good surgical technique alone in achieving an adhesion-free outcome

**Percent of adhesion-free outcomes**

- Reproductive surgery in infertile women: 63%
- Adhesiolysis: 51%
- Surgical treatments of endometriosis: 50%
- Ovarian surgery: 47%
- Tubal surgery: 50%
- Fimbria surgery: 58%

**Essential product information**

**For more information, please consult your doctor or call 1-888-GYNECARE to speak with a nurse.**

**Precautions:**

- The use of GYNECARE INTERCEED Adhesion Barrier is contraindicated in the presence of frank infection.
- GYNECARE INTERCEED Adhesion Barrier is not indicated as a hemostatic agent.

**Contraindications:**

- GYNECARE INTERCEED Adhesion Barrier is contraindicated in the presence of frank infection.
- GYNECARE INTERCEED Adhesion Barrier is not indicated as a hemostatic agent.

**Warnings:**

- The use of GYNECARE INTERCEED Adhesion Barrier is contraindicated in the presence of frank infection.
- GYNECARE INTERCEED Adhesion Barrier is not indicated as a hemostatic agent.

**Indications:**

- GYNECARE INTERCEED Adhesion Barrier is indicated as an adjuvant in open (laparotomy) gynecologic pelvic surgery for reducing the incidence of postoperative pelvic adhesions after meticulous hemostasis is achieved consistent with microsurgical principles.

Essential product information

Indications:
GYNECARE INTERCEED Adhesion Barrier is indicated as an adjuvant in open (laparotomy) gynecologic pelvic surgery for reducing the incidence of postoperative pelvic adhesions after meticulous hemostasis is achieved consistent with microsurgical principles.

Contraindications:
The use of GYNECARE INTERCEED Adhesion Barrier is contraindicated in the presence of frank infection. GYNECARE INTERCEED Adhesion Barrier is not indicated as a hemostatic agent. Appropriate means of achieving hemostasis must be employed.

Warnings:
The safety and effectiveness of GYNECARE INTERCEED Adhesion Barrier in laparoscopic surgery or any procedures other than open (laparotomy) gynecologic microsurgical procedures have not been established.

Postoperative adhesions may be induced by GYNECARE INTERCEED Adhesion Barrier application if adjacent tissues (eg, ovary and tube) and structures are coapted or contacted by the device or if GYNECARE INTERCEED Adhesion Barrier is folded, wadded, or layered. Postoperative adhesions may occur in the presence of GYNECARE INTERCEED Adhesion Barrier if meticulous hemostasis is not achieved prior to application. As with all foreign substances, GYNECARE INTERCEED Adhesion Barrier should not be placed in a contaminated surgical site.

Precautions:
Use only a single layer of GYNECARE INTERCEED Adhesion Barrier, since multiple layers of packing or folding will not enhance the adhesion barrier characteristics and may interfere with the absorption rate of GYNECARE INTERCEED Adhesion Barrier. Care should be exercised in applying GYNECARE INTERCEED Adhesion Barrier to a pelvic organ not to constrict or restrict it. If the product comes in contact with blood prior to completing the procedure, it should be discarded, as fibrin deposition cannot be removed by irrigation and may promote adhesions formation. Ectopic pregnancies have been associated with fertility surgery of the female reproductive tract. No data exist to establish the effect, if any, of GYNECARE INTERCEED Adhesion Barrier on the occurrence of ectopic pregnancies. No adequate studies have been conducted in women who have become pregnant within the first month after exposure to GYNECARE INTERCEED Adhesion Barrier. No teratogenic studies have been performed. Therefore, avoidance of conception should be considered during the first complete menstrual cycle after use of GYNECARE INTERCEED Adhesion Barrier. The safety and effectiveness of using GYNECARE INTERCEED Adhesion Barrier in combination with other adhesion prevention treatments have not been clinically established. GYNECARE INTERCEED Adhesion Barrier is supplied sterile. As the material is not compatible with autoclaving or ethylene oxide sterilization, GYNECARE INTERCEED Adhesion Barrier must not be resterilized. Foreign body reactions may occur in some patients. Interactions may occur between GYNECARE INTERCEED Adhesion Barrier and some drugs used at the surgical site. Pathologists examining sites of GYNECARE INTERCEED Adhesion Barrier Placement should be made aware of its usage and of the normal cellular response to GYNECARE INTERCEED Adhesion Barrier ‘to facilitate proper evaluation of specimens’.

Adverse reactions:
The type and frequency of adverse events reported are consistent with events typically seen following surgery. Postoperative adhesions may occur in the presence of GYNECARE INTERCEED Adhesion Barrier.

For more information, please consult your doctor or call 1-888-GYNECARE to speak with a nurse.
