Rely on EVICEL® Fibrin Sealant

How can you protect your patients from rebleeding risks while saving OR time?
Bleeding complications often occur in patients who are high risk.

The risk of potential bleeding complications in high-risk patients calls for a highly effective and time-efficient approach.¹

Potential bleeding complications are heightened in high-risk clinical situations and patient types.²,³

The risk of potential bleeding complications calls for a reliable fibrin clot that is effective independent of the patient coagulation profile—demonstrated in high-risk patients.²,³
Rely on EVICEL® Fibrin Sealant

For sustained hemostasis demonstrated in high-risk patients.¹

The unique EVICEL Fibrin Sealant delivers effective clot formation regardless of patient coagulation profile.⁴ ⁵

EVICEL™ Airless Spray Accessory is designed to deliver a rapid and adherent clot.⁵

EVICEL Fibrin Sealant creates a fibrin clot when thrombin activates conversion of fibrinogen into fibrin . . . ⁴

. . . and sustains hemostasis.¹⁵
Rely on EVICEL® Fibrin Sealant

EVICEL™ Airless Spray Accessory now available for both open and minimally invasive procedures.⁵

- The process and setup required for assembly of CO₂ may be time consuming⁶
- The Evicel Airless Spray Accessory eliminates the need for external gas sources, reducing setup time⁷
- The Evicel Airless Spray Accessory is designed to deliver a rapid adherent clot in open and minimally invasive procedures with trocars 5mm or larger⁵

Nine out of ten clinicians believe that the EVICEL Airless Spray Accessory helps drive efficiencies in the OR.⁶

The novel EVICEL Airless Spray Accessory may save valuable OR time.⁶
It’s ready when you need it

EVICEL is more convenient to prepare, use, and store compared to TISSEEL\textsuperscript{a}

- Eliminates the need for external gas sources, reducing setup time\textsuperscript{7}
- Application ready in less than one minute\textsuperscript{b}
- EVICEL Airless Spray Accessory takes less time to set up than TISSEEL DUPLOSPRAY System\textsuperscript{*}
- Refrigerator thawed and ready for 30 days versus 2 days for TISSEEL\textsuperscript{c}

\textsuperscript{a} TISSEEL is a registered trademark of Baxter International Inc
\textsuperscript{b} When at room temperature (20°–25°)
\textsuperscript{c} EVICEL thaws at 37° only.
Important Safety Information

Indication

EVICEL® Fibrin Sealant (Human) is indicated as an adjunct to hemostasis for use in patients undergoing surgery, when control of bleeding by standard surgical techniques (such as suture, ligature, or cautery) is ineffective or impractical.

Contraindications

- Do not inject directly into the circulatory system. Intravascular application of EVICEL® may result in life-threatening thromboembolic events.
- Do not use in individuals known to have anaphylactic or severe systemic reaction to human blood products.
- Do not use for the treatment of severe or brisk arterial bleeding.
- Do not use EVICEL® for spraying in endoscopic or laparoscopic procedures where the minimum recommended distance from the applicator tip to the target site cannot be ensured.

Warnings and Precautions

- Life-threatening gas embolism has occurred with the use of spray devices employing pressure regulator to administer fibrin sealants. These events appear to be related to the use of the spray device at pressures higher than recommended and/or at distances closer than recommended to the surface of the tissue. Follow labeled application instructions regarding pressure range and distance when using a spray device and monitor patients for the possibility of gas embolism.
- Monitor changes in blood pressure, pulse oxygen saturation, and end-tidal CO₂ when spraying EVICEL® because of the possibility of gas embolism.
- To reduce the risk of potentially life-threatening gas embolism, spray EVICEL® using only pressurized CO₂ gas at the recommended pressures and distances.
- Use EVICEL® spray application only if it is possible to accurately judge the spray distance, especially during endoscopic or laparoscopic procedures. Apply as a thin layer.
- Prior to applying EVICEL®, dry surface areas of the wound by standard techniques (e.g., intermittent application of compresses, swabs, use of suction devices). Prepare and administer EVICEL® according to the instructions and only with devices recommended for this product.
- May carry a risk of transmitting infectious agents, e.g., viruses, the variant Creutzfeldt-Jakob disease (vCJD) agent and theoretically, the Creutzfeldt-Jakob disease (CJD) agent.

Most common adverse events reported in clinical trials (≥5%) are bradycardia, nausea, hypokalemia, insomnia, hypotension, pyrexia, graft infection, vascular graft occlusion, peripheral edema, and constipation.

For complete indications, contraindications, warnings, precautions, and adverse reactions, please reference full package insert.
